

T.I.P.S.- Carrot Math

T= Thought- Do I need to Add, Subtract, Multiply, divide or do I need a combination of these Math operations?

I= Information- What information is provided that will assist me in creating a math problem and find a solution to the word problem?

P=Problem- What will my math problem look like? Do I need to use more than one math operation?

S= Solution- What is the best answer to this word problem?

Carrot Math Word Problem for WEE (West End Elementary School)

If you are going to give **each** student and **each** staff member at WEE one carrot how many 4x4 garden beds do you need to plant? How many carrots will be planted per each square foot? How many carrots will be planted per garden bed?

- You will have to gather some of this data from “someone” at WEE!
- A member of the garden team could probably assist you in finding number of seeds per square foot for planting. 😊

Please show/tell how you arrive at your final answer! Hint- there is more than one way to solve this problem!
